

**\*“Severely Immunocompromised” includes:**

- *Receiving chemotherapy for cancer, untreated HIV infection, combined primary immunodeficiency disorder, and conditions treated with Prednisone (in doses greater than 20mg) for more than 14 days*
- *Ultimately, if there is a question, the employees’ treating health care provider will determine whether the employee is immunocompromised*

**\*Determination of whether symptoms are “Mild, Moderate, Severe or Critical” is based on the severity of symptoms experienced. This may also be determined by the employees’ healthcare provider. Your Director, Clinical Practice can help determine whether there is a need to contact the employee’s health care provider**
